TenEleven

## HCBS Functionality

TenEleven has created functionality within **electronic Clinical Record (eCR™)** designed specifically to enable HCBS providers to succeed in a Managed Care environment. TenEleven has incorporated the forms, billing rules, and alerts according to the pre-set state requirements to have your HCBS providers up and running in **less than 30 days!**

### Clinical Features

**Assessments:** can be used with any best practice or agency driven assessment.

**“Golden Thread”:** all active needs flow to the service plan for writing goals and objectives, which will then flow to the progress notes.

**Automated Authorization Requests:** all goals and objectives pulled from the completed service plan.

**Ask about preferred pricing for HCBS providers!**

### Billing & Service Delivery

**Automated Service Threshold Tracking:** alert users that a client has reached 75% or 90% of authorized service units. Progress notes cannot be signed without authorizations.

**Go live in less than 30 days with SmartStart Implementation!**

**Automated Procedure Restriction:** progress notes cannot be signed if 2 procedures are restricted on the same day without properly reconciling the overlap.

**Automated Billing:** set up complex payment rules ahead of time to allow for efficiency. Billing based on person-centered service planning and service delivery.

**Scheduling Linked to Alerts:** service delivery is linked with automated alerts for users to complete all service delivery notes.

### Additional Features

- **Utilization Management**
- **Reporting**
- **Mobile Solutions**
